Custom Setting <b>Copy Selected to User</b> option .....	9
Added " <b>Custom User</b> " and " <b>Custom Shared</b> " subgroups to drop down pick lists. ....	10
Added <b>Rolling Date Range</b> functionality to the Date Range option.....	11
Added all <b>Text Positioning Icons</b> to the main Swimlane Timeline ribbon menu .....	11
Added " <b>Define New</b> " to top of pick list for all options supporting a custom named setting.....	12
Added swimlane title right-click option to " <b>Select all shapes in swimlane</b> " .....	12
Added checkbox to "ST Add/Show" ribbon to <b>Show/Hide Title</b> (and Logo) .....	12
Added warning to <b>Overlap Tasks</b> option when working with an Excel source file with no Unique_Id field .....	13
Added non-printable " <b>Refresh to Reconnect Data</b> " message to re-opened reports not yet refreshed.....	13
Added dialogue when re-opening older version incompatible reports.....	13

Enhanced <b>preservation of user task text positioning</b> when working with, and refreshing, reports.....	14
Enhanced " <b>Highlight Critical</b> " <b>dependency connector</b> test to require both connected tasks to be critical .....	14
Enhanced the <b>text left-of-shape &amp; text right-of-shape</b> options to default to use text wrapping.....	14
Enhanced <b>Date Range "All"</b> to automatically modify the existing date range on Refresh .....	14
Enhanced <b>Shared Folder</b> option to automatically perform a Refresh Picklist when selecting a new folder .....	14
Enhanced reading MS Project fields by <b>minimizing the app</b> to eliminate unnecessary user feedback.....	14
Fix <b>custom Filtering</b> when field specified is an "(Enterprise)" field.....	14
Fix <b>refresh of multi-page report</b> when pages have different conditional format legends .....	14
Fix the custom <b>Text "Visibility Short Name"</b> option task layout to avoid text and shape collisions.....	14
Fix <b>Title font size on Refresh</b> issue when a custom Font setting is applied .....	14
Fix <b>Paginate and Paginate to PowerPoint</b> option completion issues occurring in some environments.....	14
Fix <b>Group-by new field</b> after a Refresh .....	14
Removed the redundant "lowest interval" option from the <b>Timeline Rows</b> dialog. ....	14
Removed the redundant " <b>ST Manage/Refresh Picklist</b> " option .....	14
Dropped support for <b>Visio 2003 and Visio 2007</b> - last version is v7.04 .....	14
Replaced the default Swimlane Timeline logo.....	14

## V8.10

Added "ST Add/Show" menu "Endpoint Arrows" checkbox that will show arrows when interval bars are truncated by Date Range.

Selecting the "Endpoint Arrows" checkbox will show arrows on tasks when a Date Range is less than the full Date Range. The Endpoint Arrow setting is saved to a Style. Default is OFF. Double-clicking on the arrow moves the date range ahead or behind.

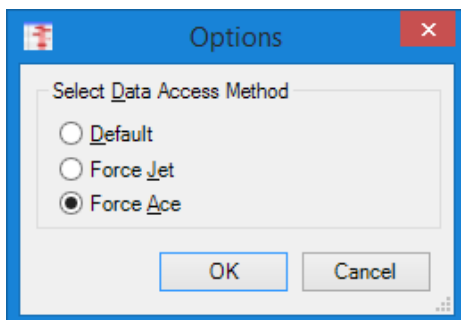

Enhanced "About" to allow users to override the default Windows Database Engine to use to communicate with the source data (JET or ACE).

Select the arrow in the lower right of the "ST Manage/About" group section allows users to manually select the Microsoft Database Engine (JET or ACE) used by the Swimplane Timeline. This option can be useful for those users running into issues with the Microsoft October 2017 Windows Update breaking the JET database engine, and resulting in "No Data was Found" error message.

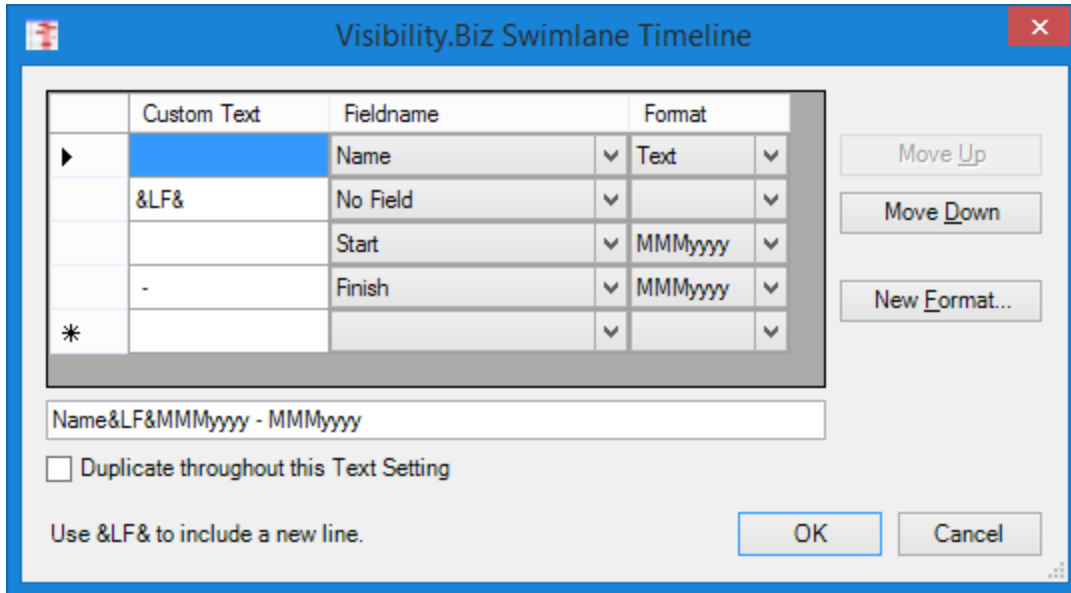

A dialogue is presented to the user to specify the Data Access Method (this only needs to be done once):

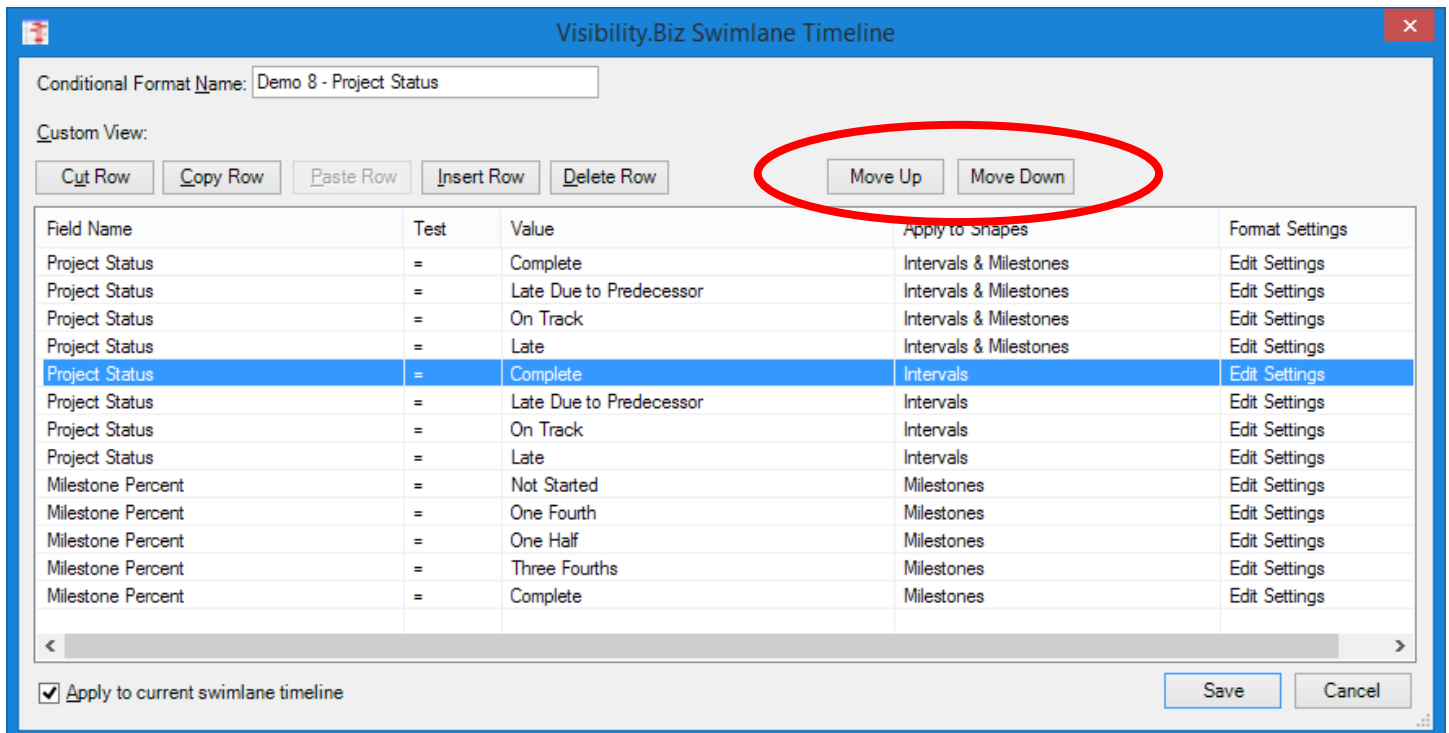

Selecting the "Force ACE" requires that the user have a PC with Office Access installed, or the Access runtime installed, that matches the version of Office.

Enhanced custom Text to support Windows date formatting when date fields are selected.

Custom Text Date Fields can now be displayed using standard Windows date formatting. The example below will show the Name, and then beneath it, the Start-Finish dates in 3-letter month and 4-digit year format.

Enhanced custom Format by adding the ability to move Conditional rows Up and Down.

---

Enhanced all custom options to support "**Copy Selected to a Folder**" instead of just Copy current to a Folder.

Enhanced custom Filter to support values of "No" and "False" when **MS Project "Active"** field is selected.

Enhanced copy custom setting to Shared Folder to have **automatic availability** in option pick lists.

Enhanced Pre-Apply Style by adding case-insensitivity when checking for "**Visibility.Biz**" to better support older manually edited XML files.

Enhanced the installed style "**Milestones All Levels**" to auto-apply the default "Primary" color palette.

---

Fixed conditional Format copy option to **overwrite any pre-existing Format** with the same name.

Fixed conditional Format copy option to include its associated **Legend Document Stencil**.

Fixed Pre-Apply Style to prevent **missing Timeline Rows**.

---

Removed "**ST Manage/Set Defaults**" since users can now pre-apply any custom Style.

Remove any existing custom **user "Default Style"** setting after installing the Swimlane Timeline since users can now pre-apply any custom Style.

---

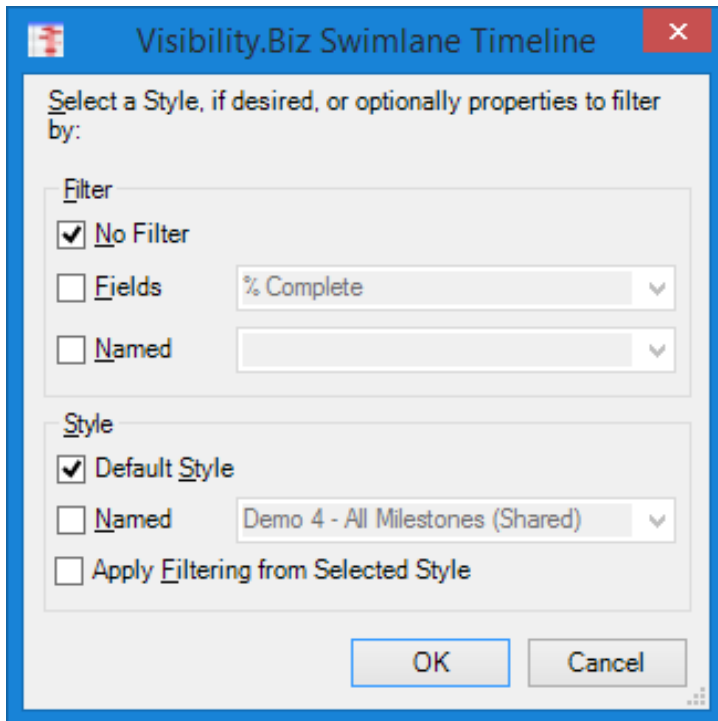

## V8.08

### Added MS Project Pre-filter and/or pre-apply Style capability to save time creating the desired report

A new checkbox has been added to the MS Project “Visibility” menu that, if checked, presents a dialogue that allows you to pre-filter tasks or pre-apply a Style prior to generating the initial Swimlane Timeline report.

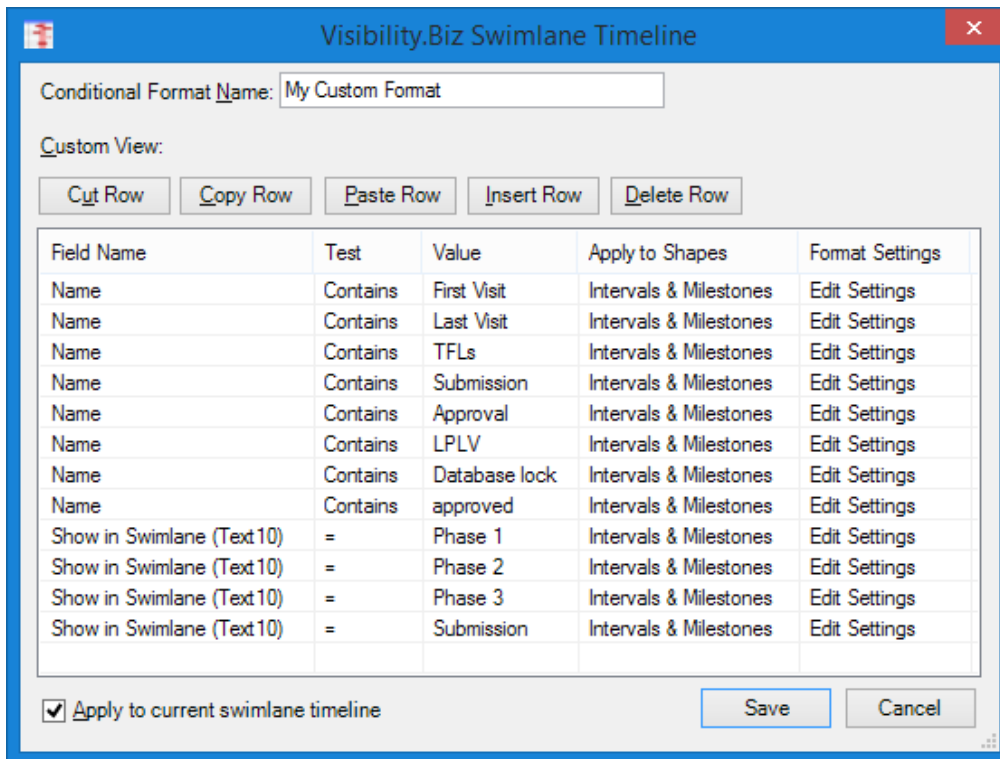

If the “Show Pre-Filter/Style” checkbox is selected, then you are presented with the below dialogue prior to generating the Swimlane Timeline report.

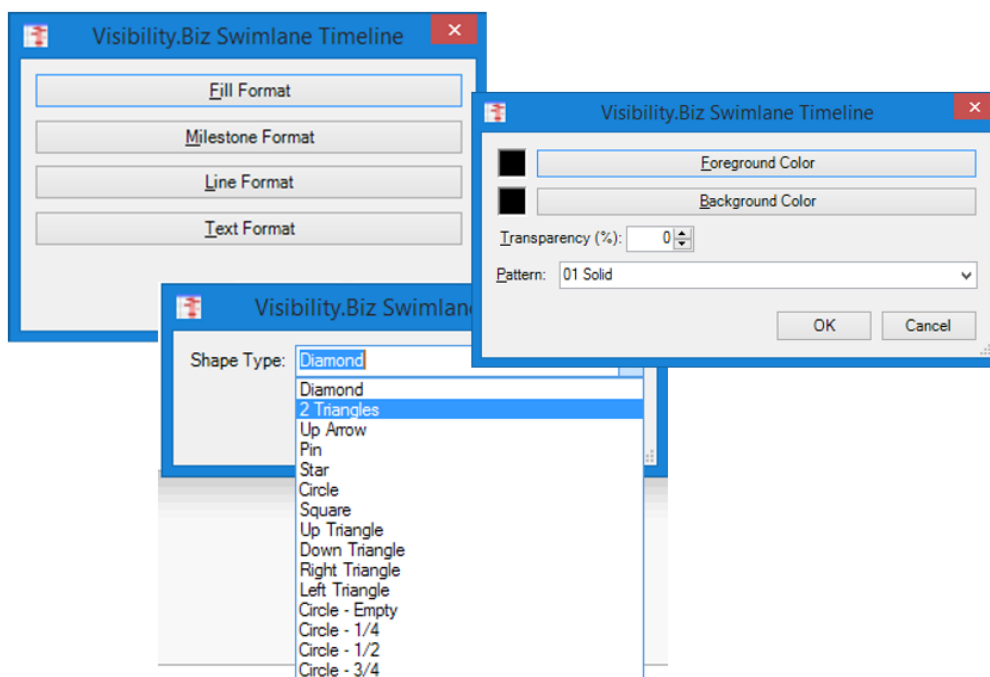

## Added Conditional Format User Interface

New functionality adds a new user interface to conditionally change the fill format, milestone shape, line format, and text format of milestones and task interval bars based on source data values.

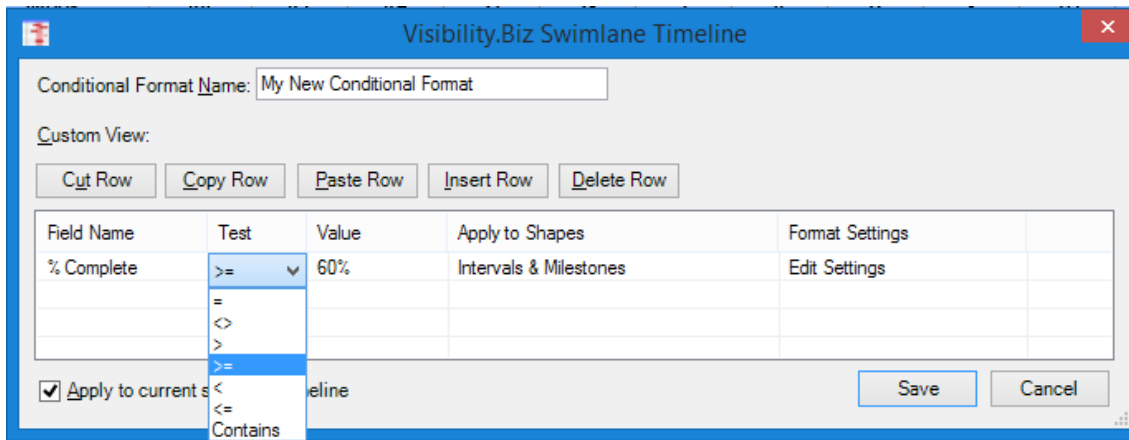

Selecting “**Apply to Shapes**” allows you to specify what type of shapes will be impacted by the formatting. You can choose between “Intervals (bars) & Milestones”, “Intervals” only, “Milestones” only, or “Percent Complete Bar”.

Selecting “**Edit Setting**” allows you to set the conditionally format for the Fill, Line, Text and Milestone Shape.

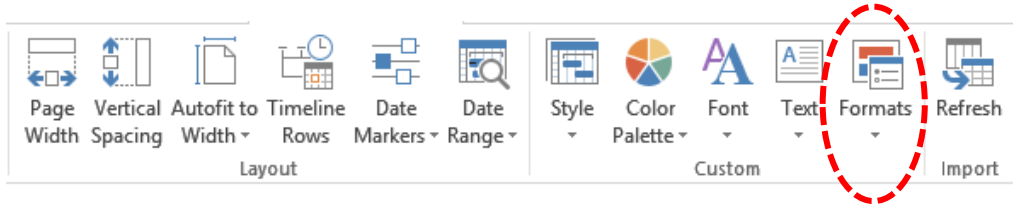

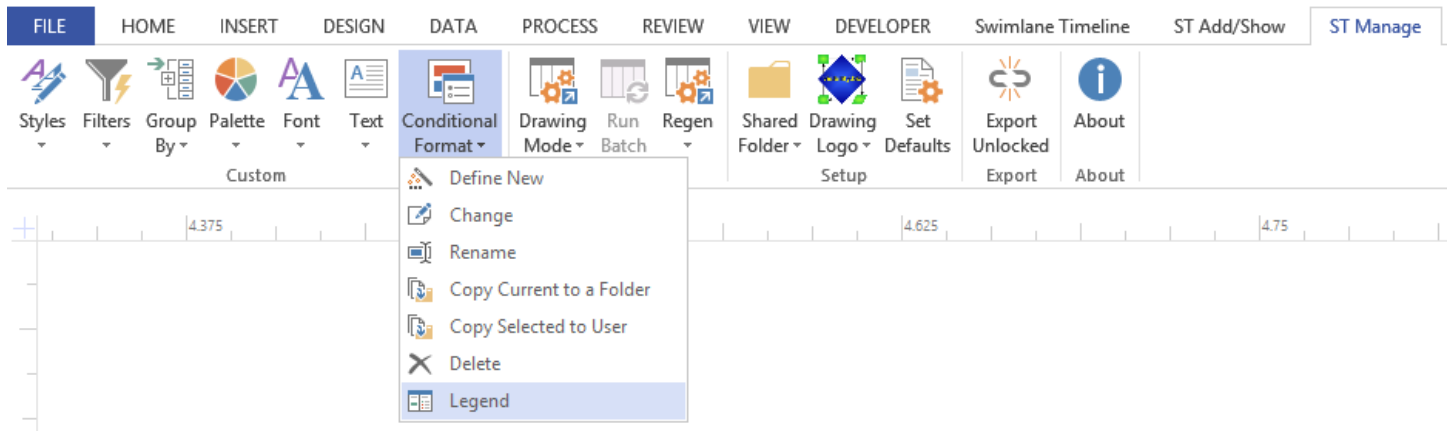

Added Conditional Format Testing Criteria "=", >, <, <> (not equal), >=, <=, and "Contains"

Moved Conditional Format from "ST Add/Show" menu to the main "Swimlane Timeline" menu

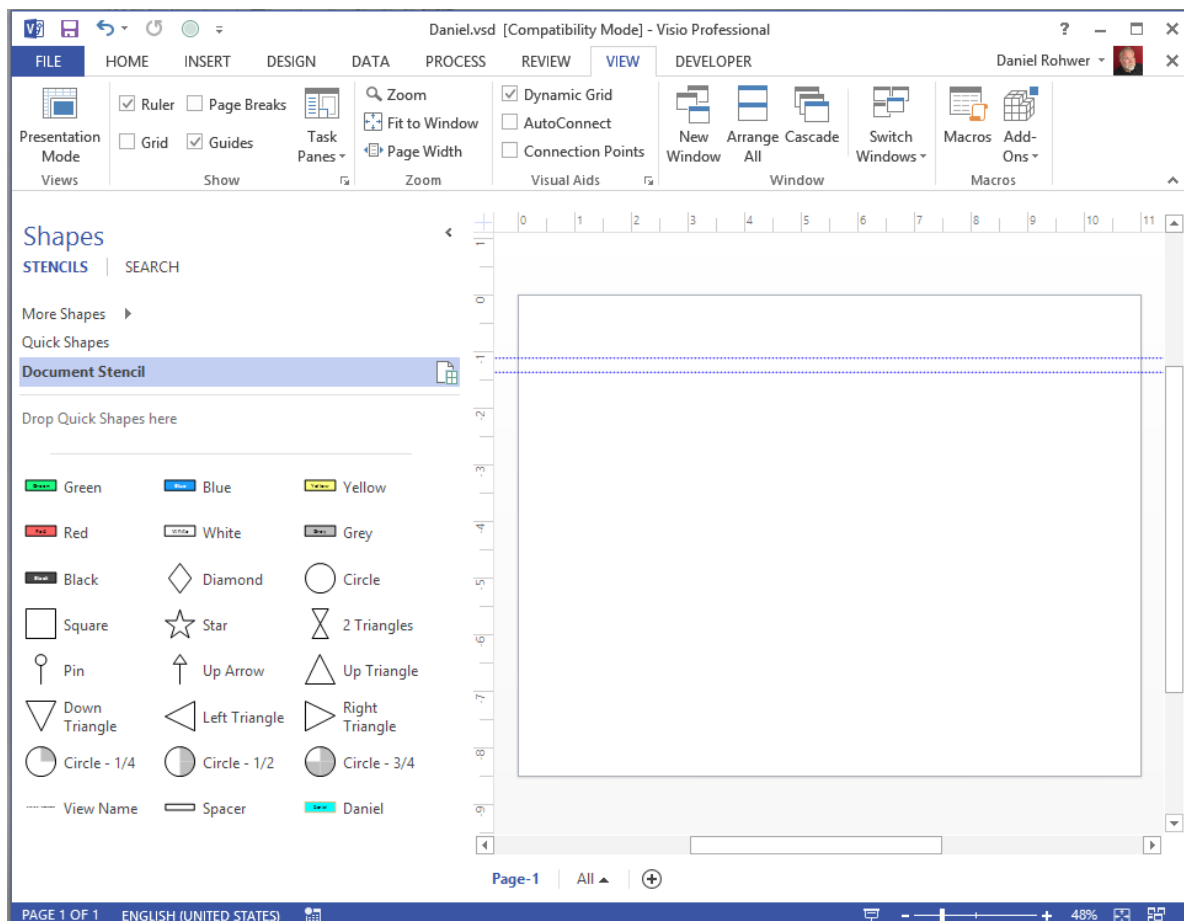

Enhanced ST Manage/Format adding Define New, Change, Rename, Delete, and Create Legend

Selecting Rename, Copy, and Delete options will impact both the Conditional Format and the associated Legend (if one exists).

Selecting the **Legend** option will open the associated Legend drawing, if one exists, or create a new Legend drawing with a default (empty) Legend pre-named to associate it with the currently applied conditional format.

## Custom Setting Copy Selected to User option

You can edit any custom setting file that you created, but you are unable to edit a custom setting file that resides in the Shared Folder location. The custom settings that you create show up in the “Custom User” section of the option pick list. The custom settings that reside in the Shared folder show up in the “Custom Shared” section of the option pick list. This applies to all custom settings including custom named: Filter, Group, Style, Palette, Font, Text and Format.

If you want to customize a Shared Folder setting then you will need to first get a copy the setting(s) locally to your local machine User location. To copy a Shared custom setting to your User location you can use the new “**Copy Selected to User**” option available in all custom setting options. You are solicited for the named custom setting to copy, and when selected it will be copied to your local User folder, and appear in your “Custom User” pick list section. You can then customize and modify the setting as desired.

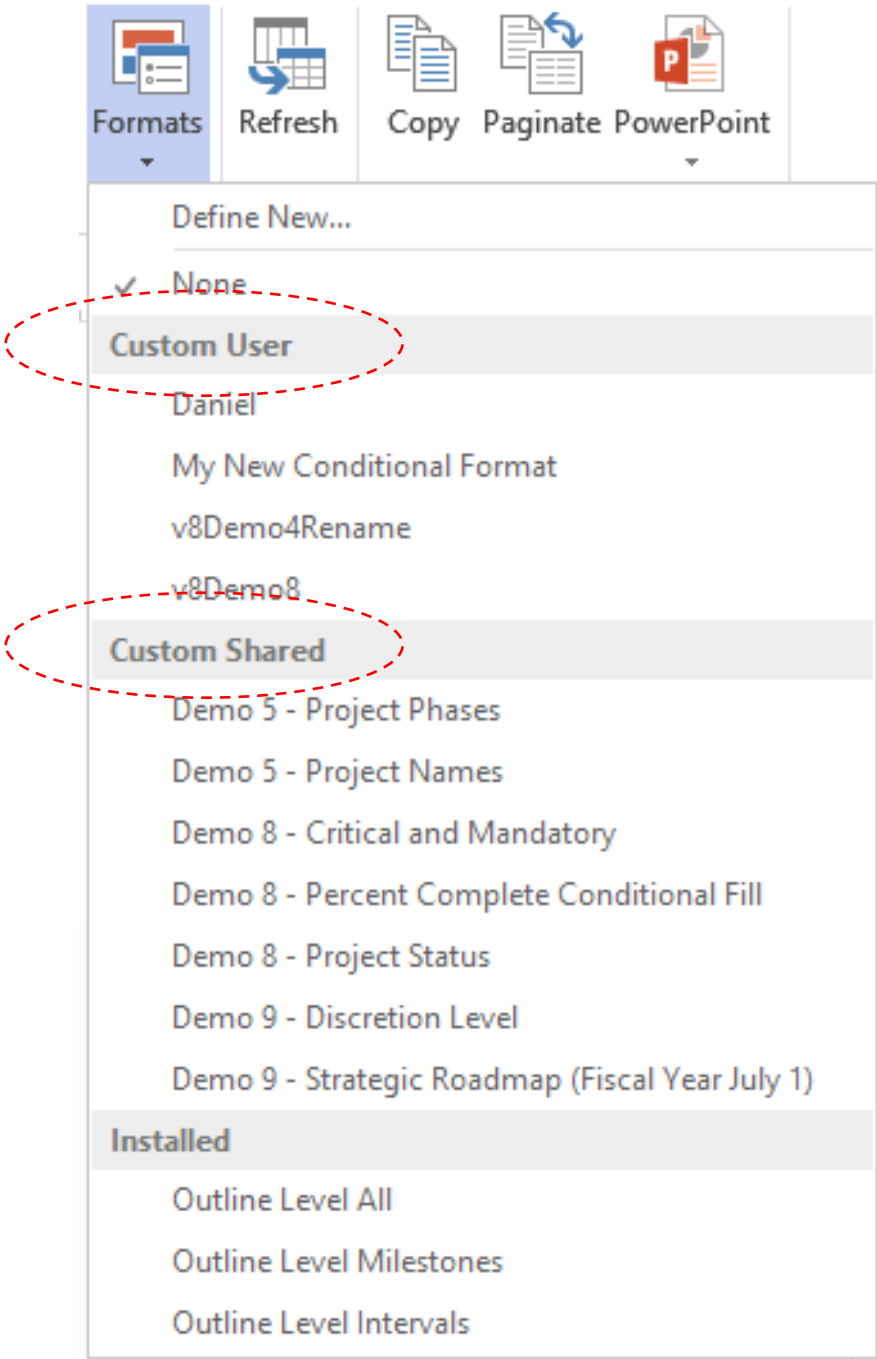

If you copy a Style setting, then all associated custom settings referenced in that style are also copied to your local PC User location.

---

Added "Custom User" and "Custom Shared" subgroups to drop down pick lists.

---

Custom User items are those custom settings created by the user and residing on their local pc, and Custom Shared items are those custom settings that reside in the Shared Folder specified. An example is shown below:

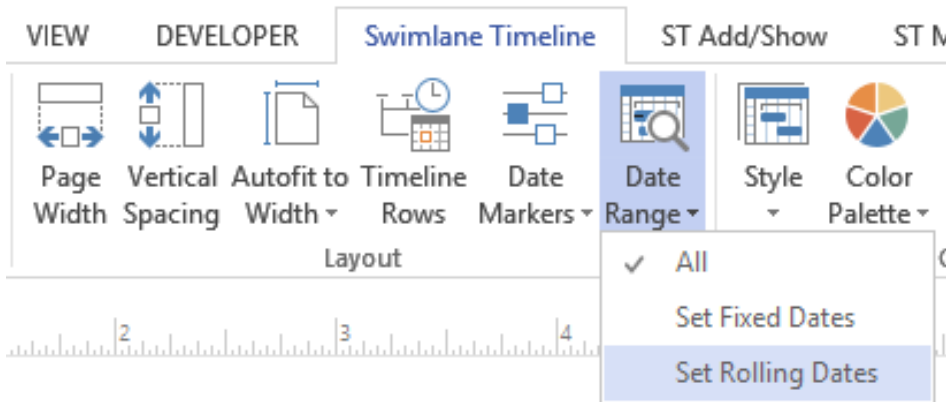

---

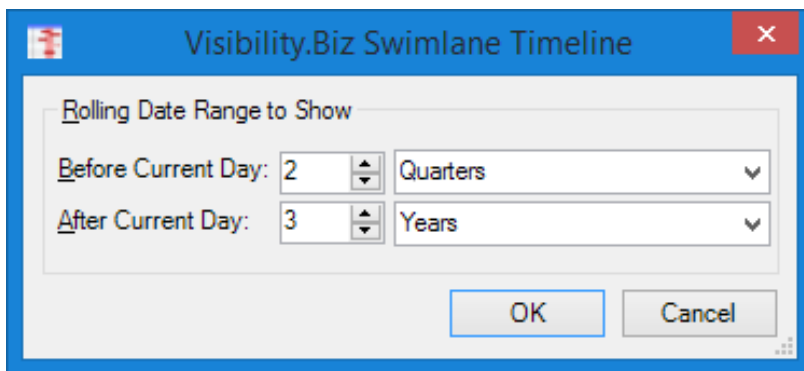

## Added Rolling Date Range functionality to the Date Range option

---

The Date Range option now allows you to set a rolling date range based on the current today's date.

Once specified, a Swimlane Timeline report will automatically update the report date range based on Today's Date when reports are refreshed.

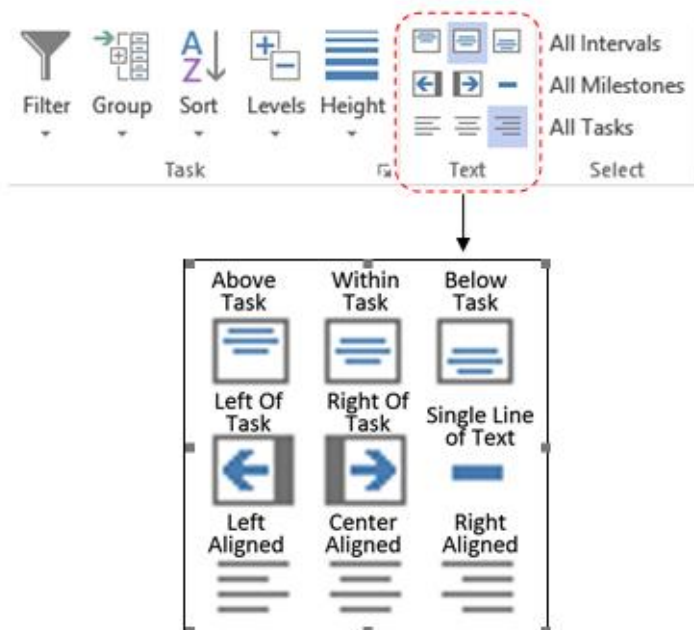

---

## Added all Text Positioning Icons to the main Swimlane Timeline ribbon menu

---

You can now easily change the position and alignment of task text from the TEXT icons in the main Swimlane Timeline menu. The text positioning options are: above shape, within shape, below shape, Left of shape, right of shape, single line of text, align left, align centered, and aligned right

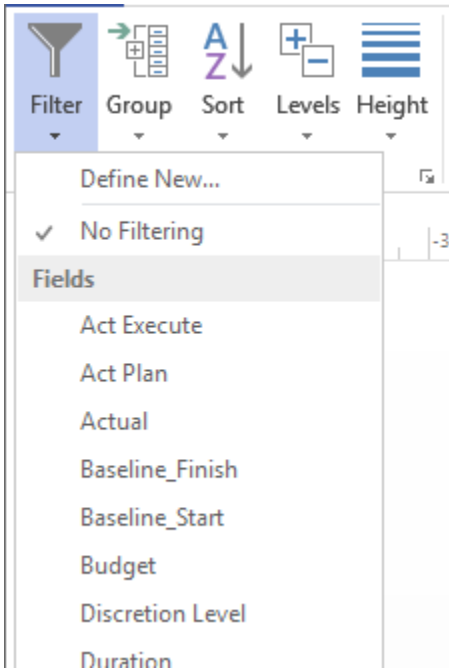

---

## Added "Define New" to top of pick list for all options supporting a custom named setting

---

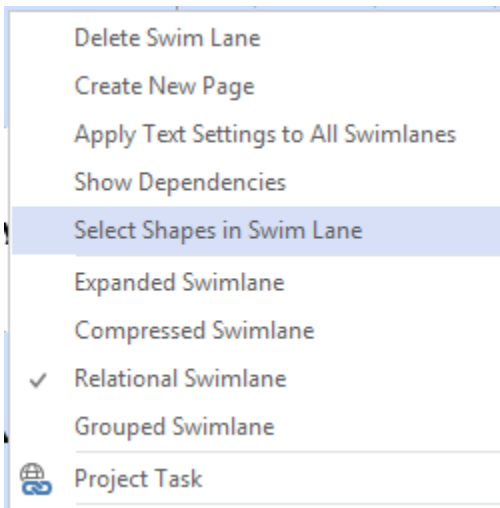

You can now create a custom named setting for the following options: Filter, Group, Style, Palette, Font, Text, and Format without leaving the main Swimlane Timeline menu.

---

## Added swimlane title right-click option to "Select all shapes in swimlane"

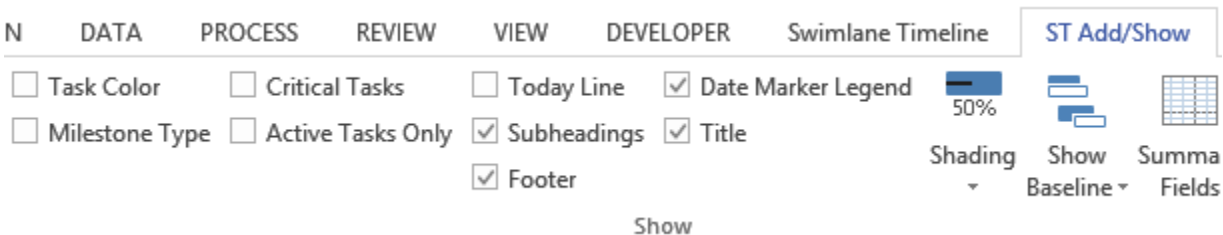

---

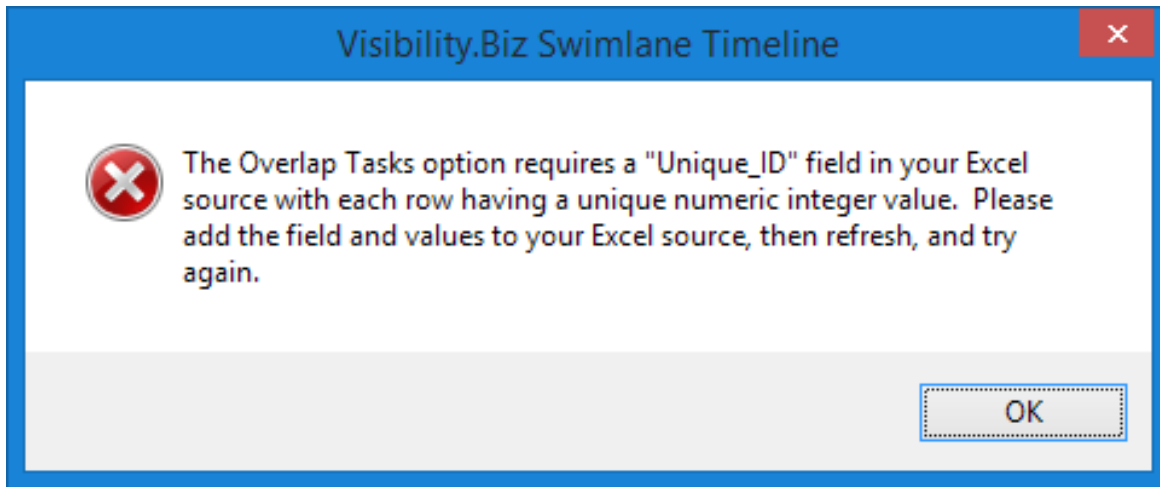

---

## Added checkbox to "ST Add/Show" ribbon to Show/Hide Title (and Logo)

---

Added warning to **Overlap Tasks** option when working with an Excel source file with no Unique\_Id field

Added non-printable "Refresh to Reconnect Data" message to re-opened reports not yet refreshed.

Swimlane Timeline  
Flexible Visual Reporting

## Demo 8 - Portfolio Status

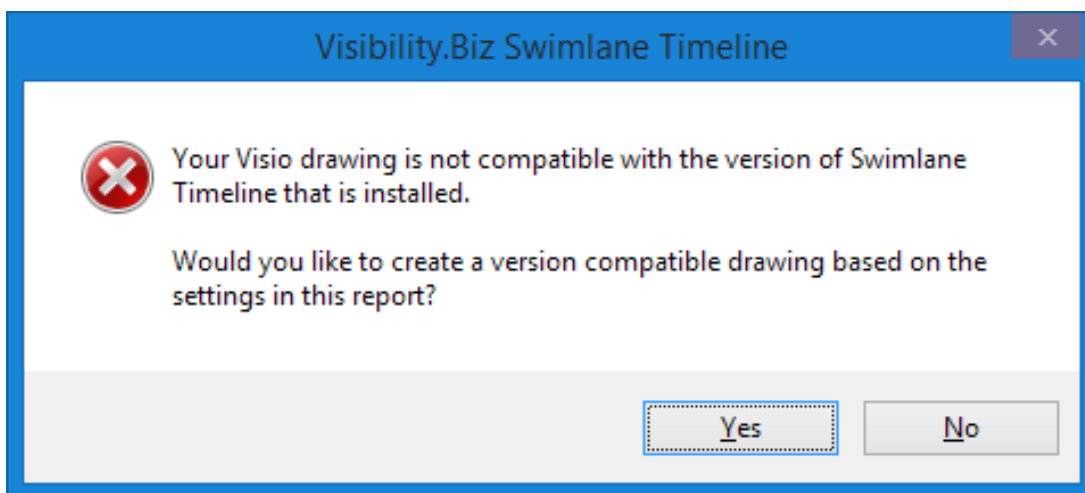

Refresh to Reconnect Data

Grouped-by: Owner

YEAR	2013				2014				2015
Quarter	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1

Added dialogue when re-opening older version incompatible reports

When opening older version incompatible Swimlane Timeline reports you are now presented with a dialogue offering you the option to **create a version compatible drawing** based on the settings in the opened report.

---

Enhanced **preservation of user task text positioning** when working with, and refreshing, reports

Enhanced **"Highlight Critical" dependency connector** test to require both connected tasks to be critical

Enhanced the **text left-of-shape & text right-of-shape** options to default to use text wrapping.

Enhanced **Date Range "All"** to automatically modify the existing date range on Refresh

Enhanced **Shared Folder** option to automatically perform a Refresh Picklist when selecting a new folder

Enhanced reading MS Project fields by **minimizing the app** to eliminate unnecessary user feedback

---

---

Fix **custom Filtering** when field specified is an "(Enterprise)" field

Fix **refresh of multi-page report** when pages have different conditional format legends

Fix the custom **Text "Visibility Short Name"** option task layout to avoid text and shape collisions.

Fix **Title font size on Refresh** issue when a custom Font setting is applied

Fix **Paginate and Paginate to PowerPoint** option completion issues occurring in some environments

Fix **Group-by new field** after a Refresh

---

---

Removed the redundant "lowest interval" option from the **Timeline Rows** dialog.

Removed the redundant **"ST Manage/Refresh Picklist"** option

Dropped support for **Visio 2003 and Visio 2007** - last version is v7.04

Replaced the default Swimlane Timeline logo

---
