

NEED HELP REPLACING MICROSOFT PROJECT ONLINE?

We'll help you find the right solution for your needs.

For any company that's scrambling to migrate all of its projects, resources, timesheets, project sites, and other data from Project Online to Project Server Subscription Edition, Milestone can help. Our team has over 20 years experience with exactly this kind of Microsoft Project migration, and we're passionate about helping you succeed. Whether you're managing a few projects or a complex portfolio, we'll have you up and running quickly.

WORK WITH THE EXPERTS. MINIMIZE RISKS.

At Milestone, we've performed dozens and dozens of migrations. We know how to streamline the process, and avoid the pitfalls along the way.

THE RISK	MILESTONE'S APPROACH
Data loss	All migrations from Project Online to Project Subscription Edition will have a manual component to them, which increases the risk of data loss or corruption. This raises the bar for how that process must be handled. At Milestone, we build in multiple layers of precautions, including scripting, rigorous testing, and QA, to ensure your data remains fully intact. Our process is tested and proven.
Compatibility issues with integrations	While integrations will likely need review and/or modifications, our team at Milestone handles this for you. And the good news is integrations are easier to implement in Project Server than they were in Project Online and many organizations may find that their integration code will become easier to maintain as a result of the changes.
OData deprecation in Project Server Subscription Edition	Because Project OData Service is deprecated in Project Server Subscription Edition, all reports and any integrations that currently rely on OData will need to be modified. To do so, Milestone will convert OData queries to T-SQL queries against the Project Server reporting database. Our team is well versed in this process and we'll handle updates to all required reports and integrations.

Choose a migration process that's tested—and proven.

At Milestone, we've performed dozens and dozens of migrations. We know how to streamline the process, and avoid the pitfalls along the way. Here's what you can expect:

◆ We assess what you need.

We start by looking closely at your current infrastructure and PPM needs, so we can identify the best next steps for your team. We'll put together a clear assessment with scope, budget, and timelines.

◆ We set you up with the right hosting services.

Whether you'd like to host your Project Server infrastructure and data yourself, or you want us to host it with our Azure-based hosting services, we'll get you fully set up.

◆ We keep you working, without a hitch.

Once we begin your migration, you'll hardly notice the work being done. We'll make sure you have access to your data and functionality throughout the entire process.

◆ We continue to provide support & guidance for as long as needed.

Once we make sure you're up and running, we can provide long-term training and support to help you become increasingly more productive post-migration.
